

Centralized Event Management & Participation Platform for Colleges

Problem Statement

Currently, colleges organize multiple events such as hackathons, cultural fests, workshops, and sports competitions, but the process of promotion, registration, and management is often scattered across social media, spreadsheets, and manual systems. This causes difficulties for students in discovering events, inconvenient manual registration and tracking, lack of a unified platform for organizers to manage participants, and limited analytics for colleges to measure engagement.

We propose a web-based centralized platform that allows colleges to host and manage events digitally. Students can discover events, register seamlessly, and track participation, while organizers can manage registrations, publish results, and communicate updates in one place. The system will provide role-based dashboards (Admin, Organizer, Student), authentication with WebAuthn/College login, and analytics to improve efficiency and engagement.

Core Features

Student Side:

- 1 Register/Login (Email/College ID/Google Auth)
- 2 Browse/search/filter upcoming events (sports, hackathons, workshops, fests)
- 3 Event detail page (rules, prizes, deadlines, organizers)
- 4 Online registration (individual/team)
- 5 Student dashboard (registered events, status, certificates)
- 6 Notifications & reminders (email + in-app)
- 7 Download participation certificates

Organizer Side:

- 1 Create/manage events (title, description, poster, rules, deadlines, venue)
- 2 Manage participant list (approve/reject, export to Excel)
- 3 Announcements and communication with participants
- 4 Upload results/winners
- 5 Auto-generate certificates

Admin Side:

- 1 Manage users, events, and organizers
- 2 Monitor ongoing events
- 3 View analytics reports (event popularity, participation stats)
- 4 Resolve complaints/disputes

Advanced Features (Major Project Boosters)

- 1 Payment Gateway (for paid events)
- 2 Gamification (points, badges, leaderboard for active students)
- 3 Analytics Dashboard (college/department participation trends)
- 4 WebAuthn/SSO Authentication for secure login
- 5 Chatbot for FAQs (event queries)
- 6 Progressive Web App (PWA) – usable like a mobile app
